RFIDHub

RFIDCanada
Automating Identification

RFIDHub

RFIDHub is not a closed box piece of software. It is a work bench to help you construct your RFID Solution by navigating through the wide selection of configurable parameters available through the GUI combined with the integrated data synchronization module and API's

RFIDHub is a complete service platform supporting diverse Radio Frequency Identification technologies including UHF and HF

RFIDCanada
Automating Identification

RFIDHub

RFIDHUB was professionally developed to meet a wide range of RFID application requirements according to customer needs and years of professional experience in the field

RFIDHUB provides bi-directional communication between devices and data integration interfaces, such as databases, using common data formats.

This platform enables the user to register compatible licensed RFID readers, collect readings from tags, and generate comprehensive analytical reports according to predefined custom parameters in a simple and intuitive user interface.

- Off-shelf Solution
- Easy to Deploy
- Access Control
- Reporting Module
- Dynamic Visual
- Data Integration
- User-friendly Interface
- Life-time License
- Inventory Management

Automating Identification

RFIDHub

CORE COMPONENTS

Traceability

- Inbound and outbound object tracking
- Movement tracking on assembly line
- Zone-based location tracking

Modular Interfaces

- Enable reliable bi-directional communication
- Use built-in data sync units for efficient app-database synchronization

Localization

- Mapping the live locations of items in a warehouse or factory floor
- Keeping track of inventory within an area

Reporting Module

- Generates analytical, structured, and unstructured reports
- Supports predefined parameters and common-use formulas
- Allows export of reports in multiple formats

Tracking Module

- Keeps track of and updates inventory according to the application type implemented.
- Enables the export of the inventory reports in multiple formats.

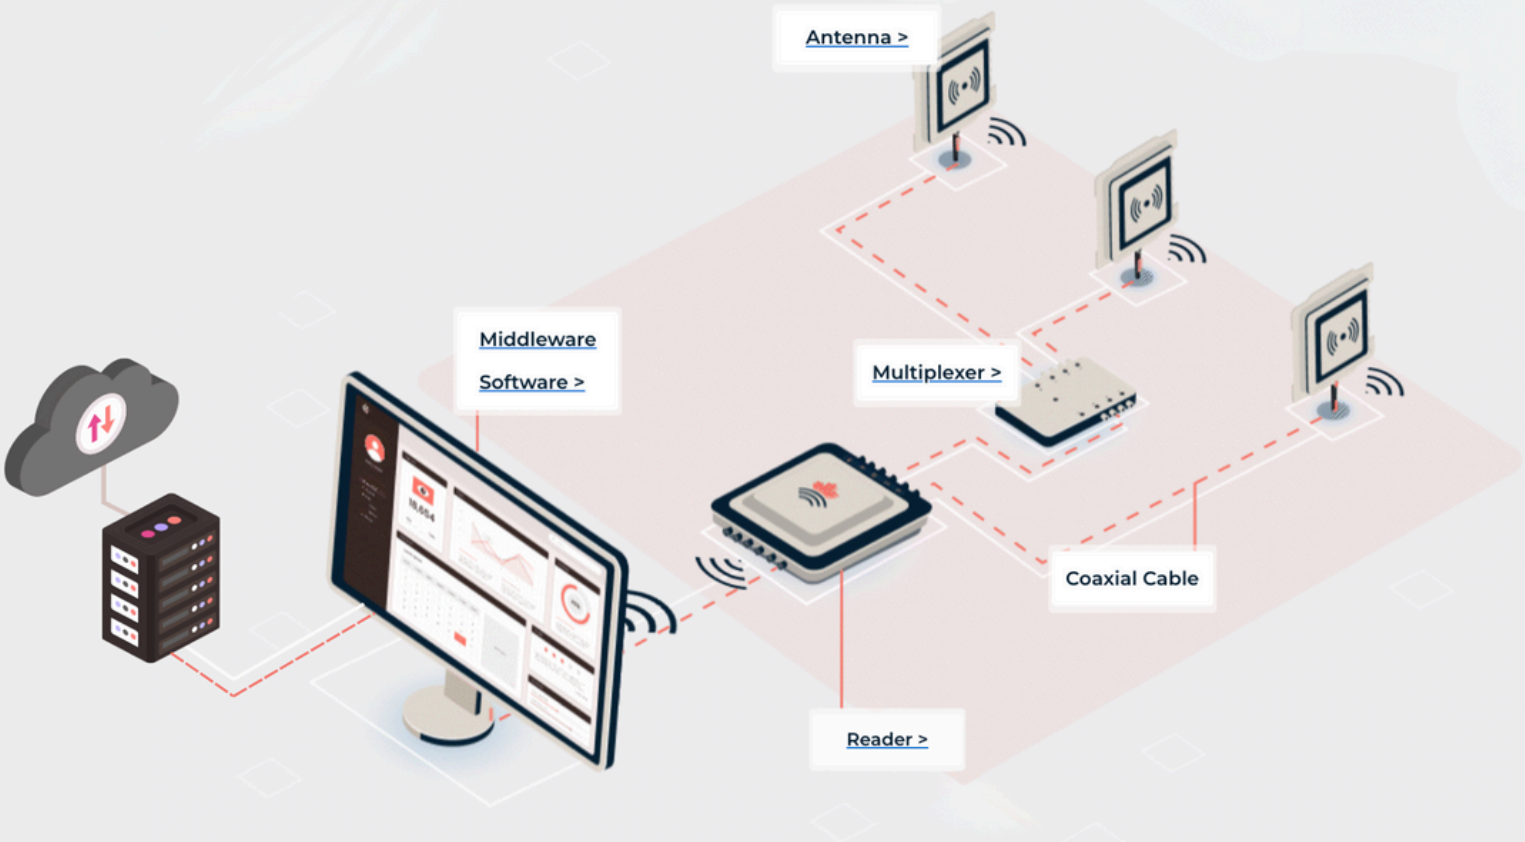

Real-time Monitor

- Real-time tag reading provides users with an instantaneous and dynamic experience.
- Users can conveniently choose between a detailed list view or a comprehensive map display
